PAYMENTS

Digital Lockbox for smooth virtual card acceptance

Turn payment chaos into seamless automation

Managing virtual card payments can be overwhelming for suppliers. AR teams face an influx of virtual card emails, leading to tedious manual work and exposure to raw credit cards data. Digital Lockbox from Billtrust automates this process - freeing up resources, strengthening compliance integrity and cutting administrative costs. Its straight-through payment processing helps businesses accelerate cash flow.

"Because of Digital Lockbox and the automation it provides, our employees can focus their talents elsewhere instead of losing valuable time opening emails and processing complex virtual card payments."

Melinda Kilonsky, Regional Credit Manager, Cooper Electric

Boost efficiency
by cutting manual work and freeing up resources.

Control expenses
with optimized acceptance costs and reduced interchange fees.

Gain deeper control
over acceptance policies with custom-made business rules.

Strengthen security
by eliminating employee access to raw card data.

Straight-through processing
- With direct connections to leading banks and financial systems, along with advanced automation technology, we seamlessly extract data from emails and portals.
- **99% of virtual cards are processed successfully without any manual intervention!**

Customized control
- Expanded options for payment policies personalization, including interchange fees optimization, advanced business rules and streamlined card acceptance management — by company or buyer — to control costs and enforce clean remittance.

PCI-compliant payment data handling
- Secure storage of credentials and on-file cards safeguards sensitive information using industry-leading security and encryption standards.
