

Get unstuck!

Escape the 12 dangers of antiquated AR processes

Your accounts receivable (AR) team might spend years making gradual accommodations to all your customers' varied payment requirements.

But that can result in you being trapped in a “dirty dozen” set of costs and risks that can impact the bottom line of your business.

Delays and labor costs of processing and reconciling paper checks

The inconveniences of physical lock boxes

The costs and delays of opening emails one-by-one

Employee burnout from the repetitive drudgery of manual tasks

Customer service complaints and reputational damage

Customization required for invoicing via each separate AP portal

PCI issues in accepting credit card payments

The cost of interchange fees

The need to use (and safely record) multiple logins and passwords

Slowness in receiving payments, regardless of payment format

Data vulnerability

Human error caused by all of the above

Radically simplify and optimize your B2B payments processes – and save!

To “get unstuck” from these costs and risks, implement a digital B2B payments network.

An AR department using a solution like Billtrust’s Business Payments Network (BPN) that uploads 750 invoices to AP portals, processes 650 virtual card payments, and receives 450 ACH payments per month might see **ROI in excess of 300%**.

Potential ROI

300%

Investment

750 invoices per month to AP portals + **650** virtual card payments per month + **450** ACH payments per month = **300%+ ROI**
